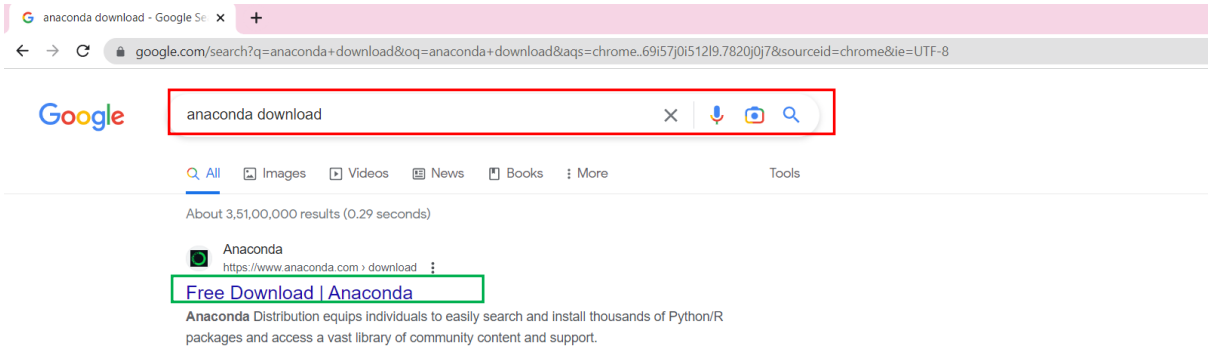
Installation Anaconda

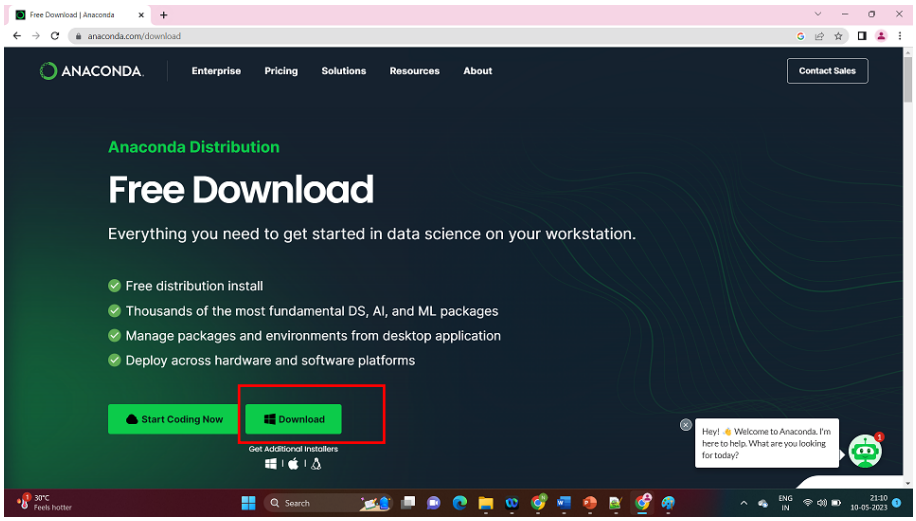
Step1:

open any web browser for example open google chrome type anaconda download



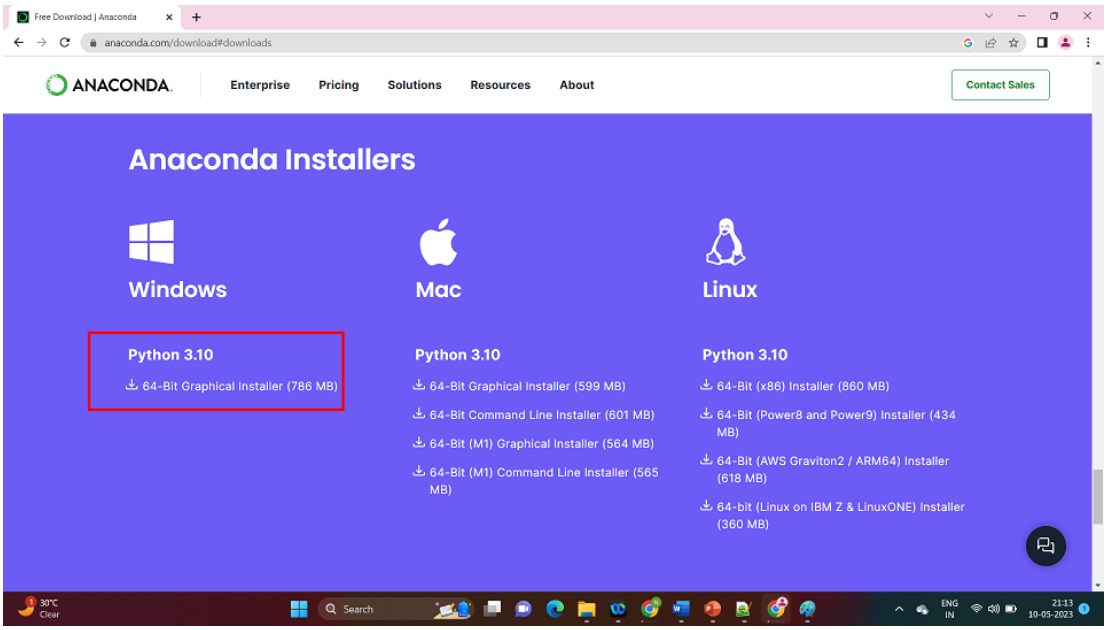
Step2:

Click on free download like shows above figure, then the page will be redirected to shown as below figure.



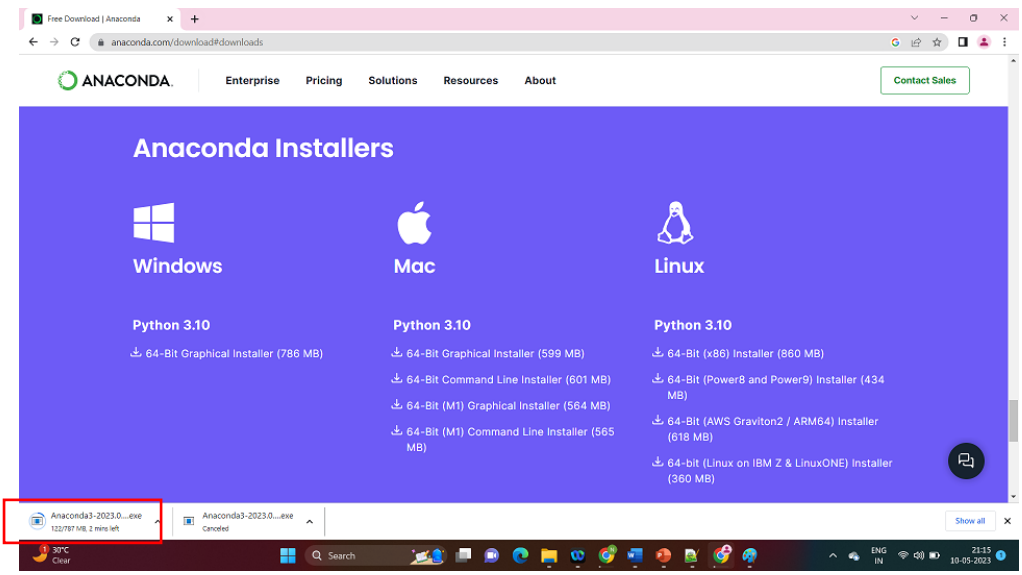
Step3:

Click on download button like shown above figure it will be redirected to download page its show as below figure.



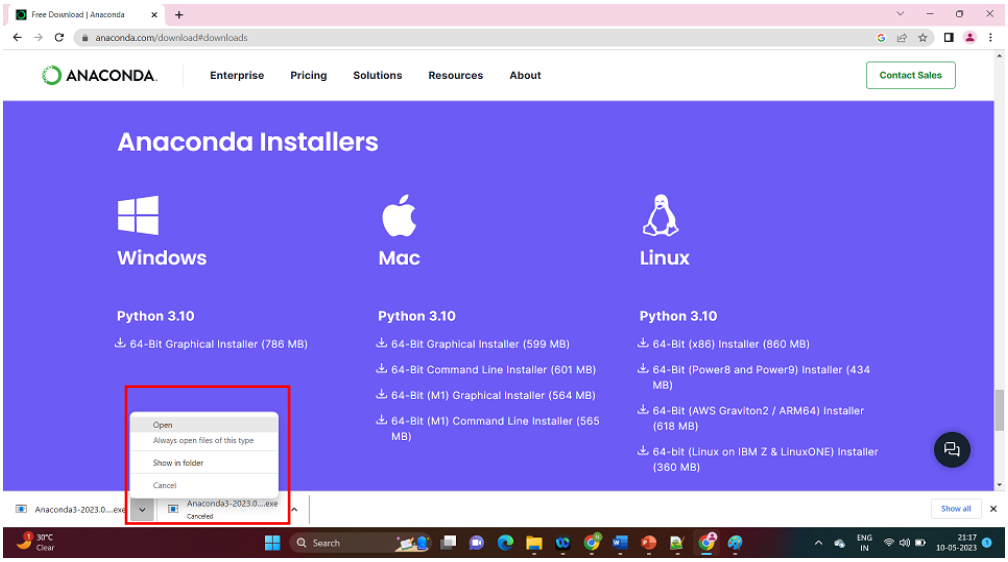
Step4:

we can see anaconda exe file downloading



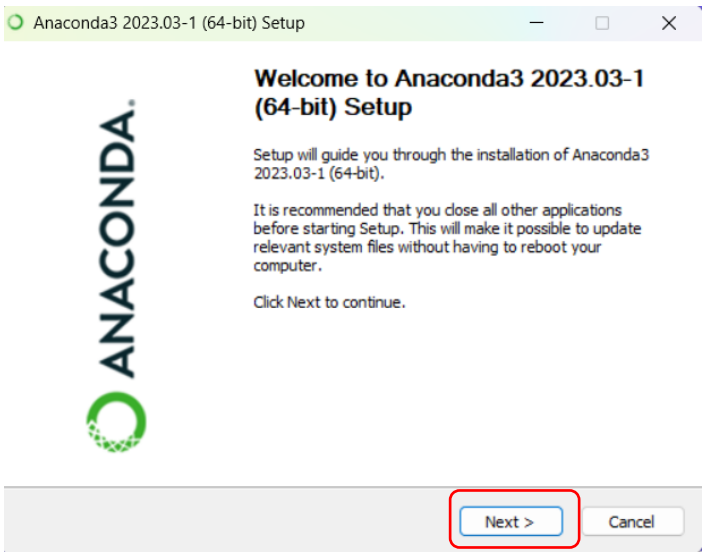
Step-5:

now you can open the exe file to install anaconda, the exe file will be in downloads



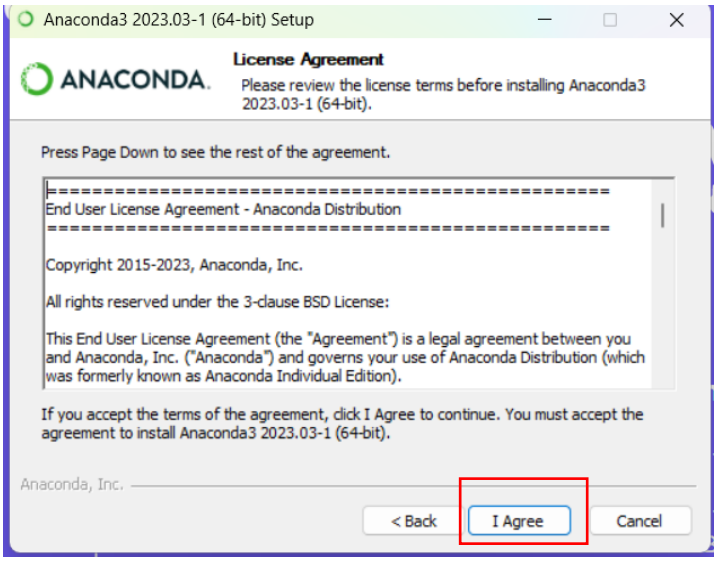
Step-6:

when you open the exe file a dialogue box will open like below figure, click on next



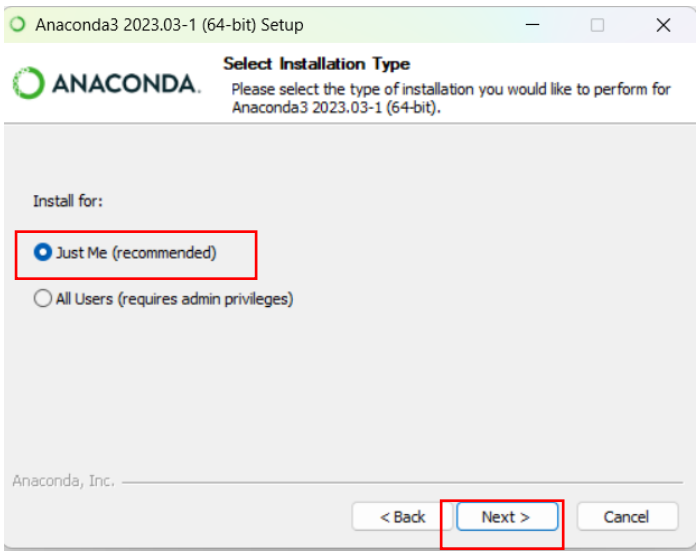
Step-7:

When you click on next it will be redirected to another dialogue box like shown below figure



Step-8:

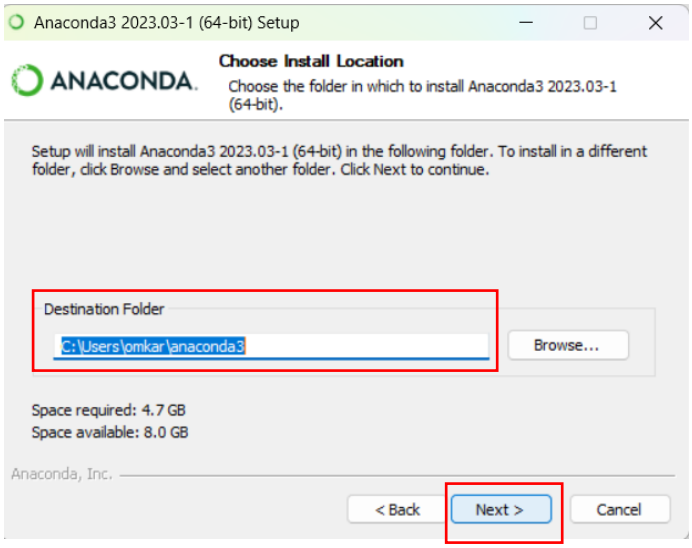
Click on I agree then select just me(recommend) and click on the next button



Step-9:

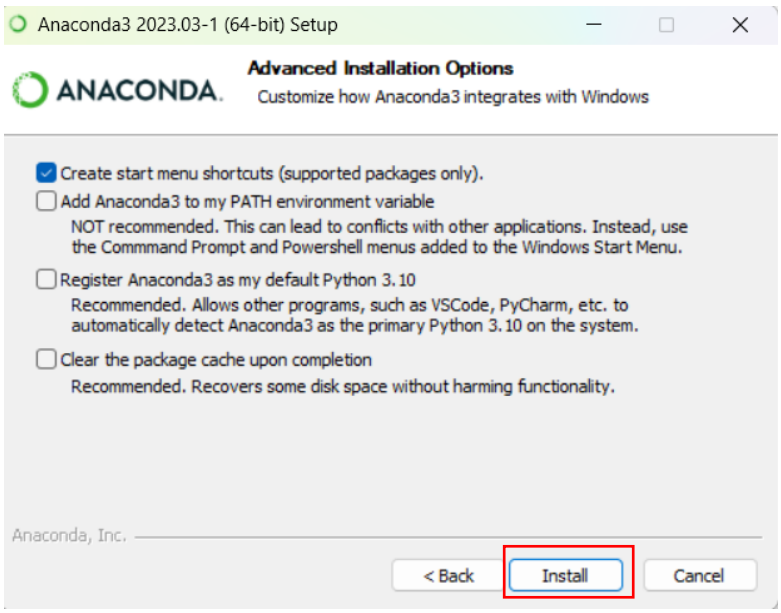
if you want change the destination folder or keep it is as it is

generally it takes c:\\users\<name_of_the_user>\anaconda3



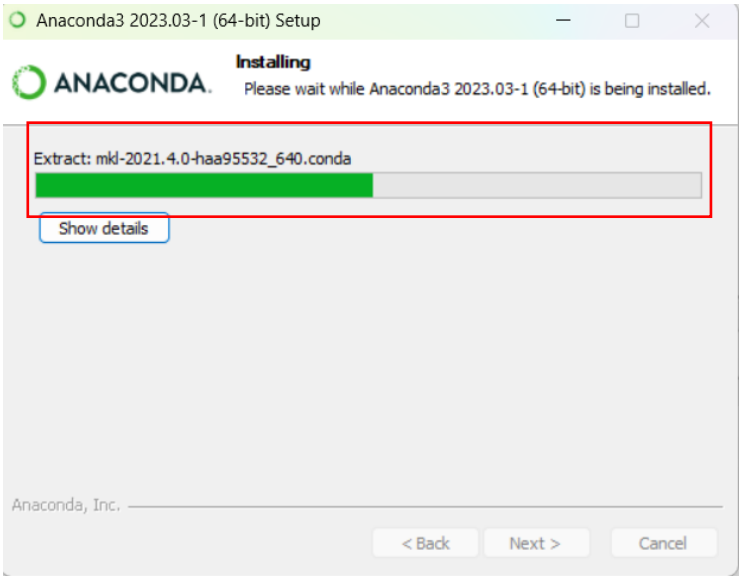
Step-10:

just click on install button



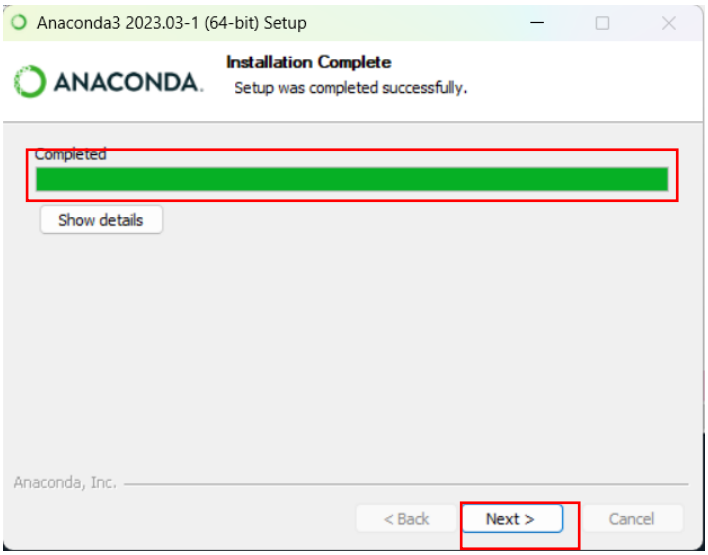
Step-11:

Just wait for some time till the green line complete



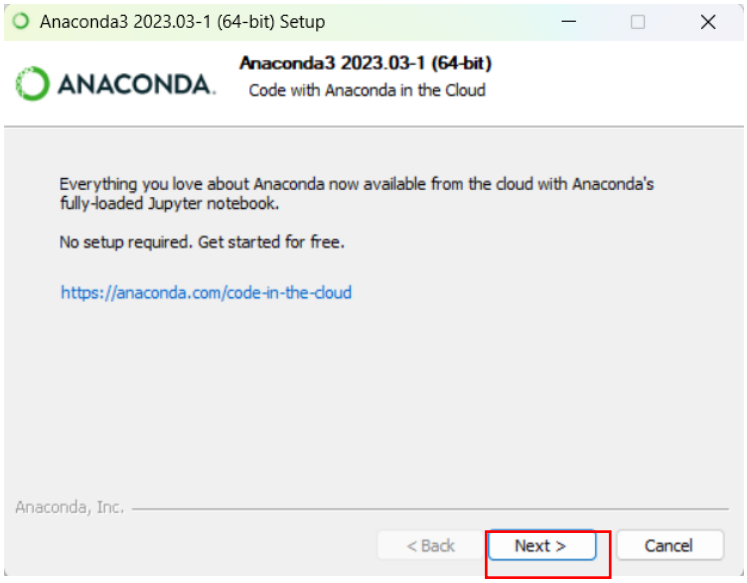
Step-12:

Below figure shows how the installation complete, then click on next



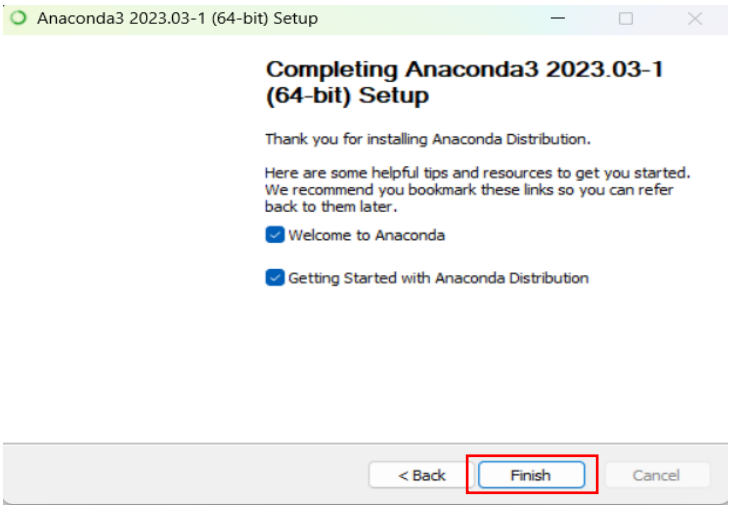
Step-13:

Click on next



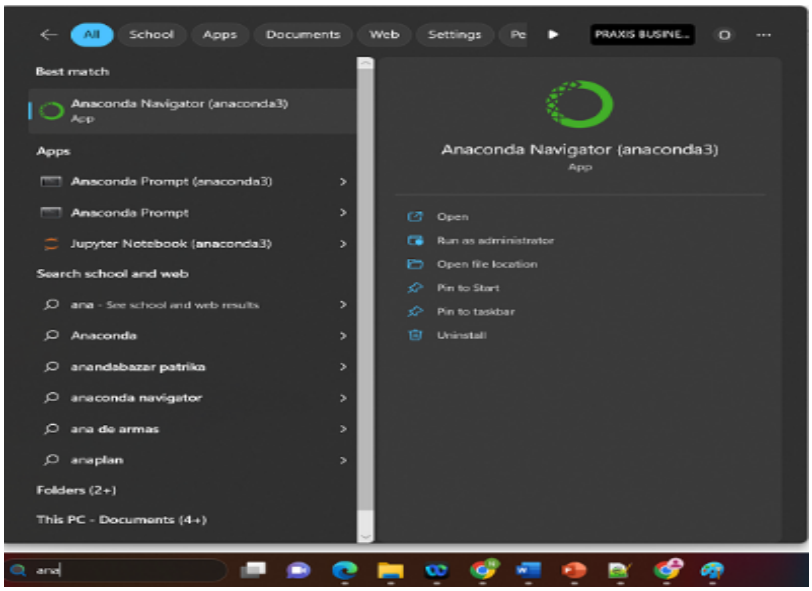
Step-14:

Click on finish



Step-16:

Search Anaconda navigator in search bar, click on open



Step-17:

It will take few minutes to open, while opening you can see a anaconda intialization symbol like below

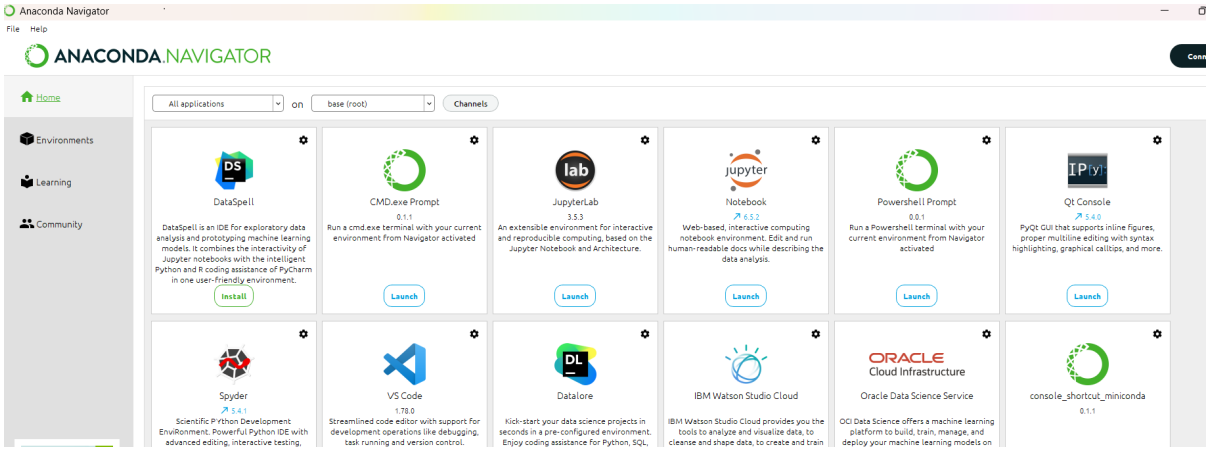
Step-18:

Ones it is opened you can see the anaconda initialization symbol in task bar, click on that you will see a anaconda navigator application,

Next search for Jupyter note book click on launch

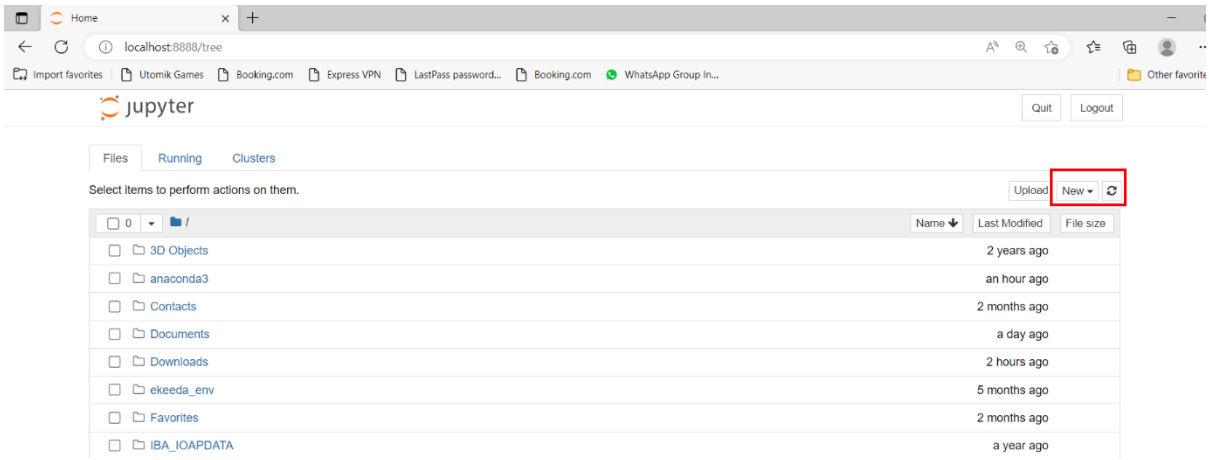
Note**:

If under jupyter note book if you see install, then first install it. Then you will see launch



Step-19:

Ones you launch jupyter notebook , a jupyter interface will open web browser either edge or chrome



Step-20:

Click on new icon it's on top right corner like shown in above figure, a new == > Python 3

A python notebook will open
